Using the incorrect fluid can damage the machine or produce subpar results. Always adhere to the manufacturer's specifications.

Q2: How often should I replace the dielectric fluid?

A2: The frequency of dielectric fluid replacement depends on usage, but it's generally recommended to check and potentially replace it every few weeks or months. Regular monitoring for discoloration, contamination, or a decline in performance is essential. Refer to the maintenance schedule in your user manual for specific guidelines.

Q3: What are the safety precautions when operating the Exeron 312?

A3: Safety is paramount. Always wear appropriate safety glasses, gloves, and other personal protective equipment (PPE). Never touch the electrode or workpiece during operation. Be aware of potential hazards like electrical shocks and high-pressure fluid. Thoroughly read and understand the safety instructions provided in the user manual before operating the machine.

Q4: Can I machine non-conductive materials with the Exeron 312?

A4: No, the Exeron 312, being an EDM machine, relies on electrical discharge to remove material. Therefore, it is only suitable for machining electrically conductive materials. Non-conductive materials require different machining techniques.

Q5: How do I troubleshoot a cutting accuracy issue?

A5: Several factors can affect cutting accuracy. Check the electrode condition, ensure proper dielectric fluid level and quality, verify the machine settings, and inspect for any mechanical issues. If the problem persists, consult the troubleshooting section of your user manual or contact Exeron support.

Q6: What is the typical lifespan of the Exeron 312?

A6: The lifespan of the Exeron 312 depends heavily on usage, maintenance, and the operating environment. With proper care and regular maintenance, the machine can offer many years of reliable service. However, individual components may have shorter lifespans and require replacement over time.
